

What We Are Building

Rafael Labra & Juan José Buenahora

April 2026

Luka is a Latin American personal finance platform designed for individuals, couples, and groups who manage money across multiple bank accounts, cards, fintech apps, and currencies. The core problem it solves is simple: keeping track of your finances today requires juggling too many tools, none of which talk to each other, and none of which give you a clear, real-time picture of where your money is going.

The platform automatically captures every income and expense transaction through bank email notifications, direct bank connections via scraping, and open banking integrations. Each transaction is classified by AI the moment it arrives and delivered to the user as a real-time alert through WhatsApp. Users then interact with a responsive web dashboard that brings together expense tracking, household budget management, subscription monitoring, shared expense splitting, and multi-currency visibility in a single, automated experience.

Luka is built LATAM-first, currently active across Chile, Colombia, Mexico, Peru, Brazil, and the United States, with infrastructure designed to onboard banks across the region as the product scales. The long-term vision is a two-sided platform where individual users gain clarity and control over their finances, while financial institutions gain access to the structured behavioral data they need to offer better, more personalized products.
